Allow users to create their own playlists

- **Social Features:**

User profiles and followers Integration with social media platforms for sharing favorite tracks. likes, and user reviews

2. Title Page

Display app's logo prominently at the top of the title page. The logo should be visually appealing and represent brand or app's identity.

3. Problem Identification

- **Content Discovery problem:** Users may struggle to discover new music or podcasts that align with their interests. The abundance of content available can be overwhelming, and users may desire better recommendations, curated playlists, or intuitive search options to help them find relevant and engaging content.
- **Offline Listening issues:** Inconsistent or unreliable offline listening functionality can be frustrating for users who want to enjoy their favorite music or podcasts without an internet connection. Users may desire a seamless offline experience with reliable download options and easy access to downloaded content.
- **Displaying Advertisements:** Excessive or intrusive advertisements can disrupt the user experience and hinder enjoyment. Users may appreciate an app that offers non-intrusive advertising options or provides ad-free listening as a premium feature.
- **Complexity of User Interface and Navigation:** Complex or unintuitive user interfaces can hinder the app's usability. Users may encounter difficulties in navigating through different sections, finding specific songs or episodes, or managing their playlists. A clear and intuitive interface with efficient navigation options is essential.

4. Proposed Solution:

a. The usefulness of the proposed solution:

- **Personalized content suggestions:** Improve the search functionality with advanced filters, keyword suggestions, and predictive search to make content discovery easier.
- **Enhance the offline mode:** Provide options for users to automatically download new favorite songs. improving download speeds, offering background downloads, and optimizing storage usage.
- **Advertisements:** provide users with control over their ad preferences, allowing them to adjust the frequency or types of ads they encounter.

- **Simplify the user interface & navigation:** Provide easily accessible menus, sections, and controls for seamless navigation between playlists, libraries, and search functions.

b.Details of all the fields and Functionalities:

- User Registration: Users create an account to access the app
- Home Screen: Shows recommended music and podcasts
- Music Library: Browse and search for songs, albums, and artists.
- Audio Playback: Play, pause, skip, adjust volume.
- Offline Listening: Download music and podcasts for listening without internet.
- Social Features: Connect with others, share playlists, and interact.
- other Features: Continuous playback, speed adjustment, bookmarks.

5.Conclusion:

This app allows users to create playlists, download content for offline listening, and offers social features for interaction with other users. It provides a user-friendly interface, personalized recommendations, and a vast library of content and offers a comprehensive platform for users to discover, stream, and manage their favorite music and podcasts.
